

Open Data Service

Arvi Leino

City of Turku

27.11.2019

Overview

- City's central administration provides centralized support service for opening data and utilizing open data.
- The open data support service promotes open government principles, interoperability ja open cooperation.
- Activity is based on multiple strategies.

Turku City Strategy

(quotes from)

Transparent evaluation keeps us on the right track

Decision making will be transparent and consistent. When it comes to increasing transparency, open data brings new opportunities, and Turku aims to be at the international forefront in the utilisation of these opportunities.

Turku creates well-being and activates

By developing our information management, we are also promoting transparency and new kinds of business as we make our databases available to citizens and companies. The city's aim is to be an international forerunner in the digital platform economy that is based on the utilisation of data.

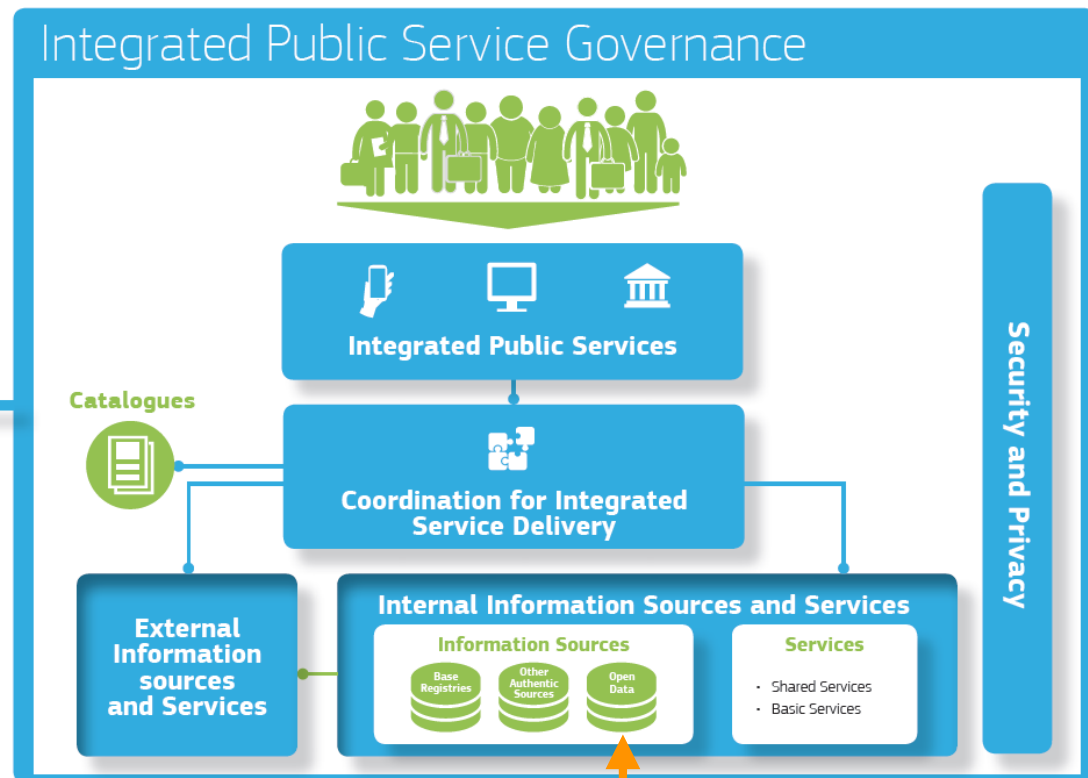

Interoperability

Open Data Examples

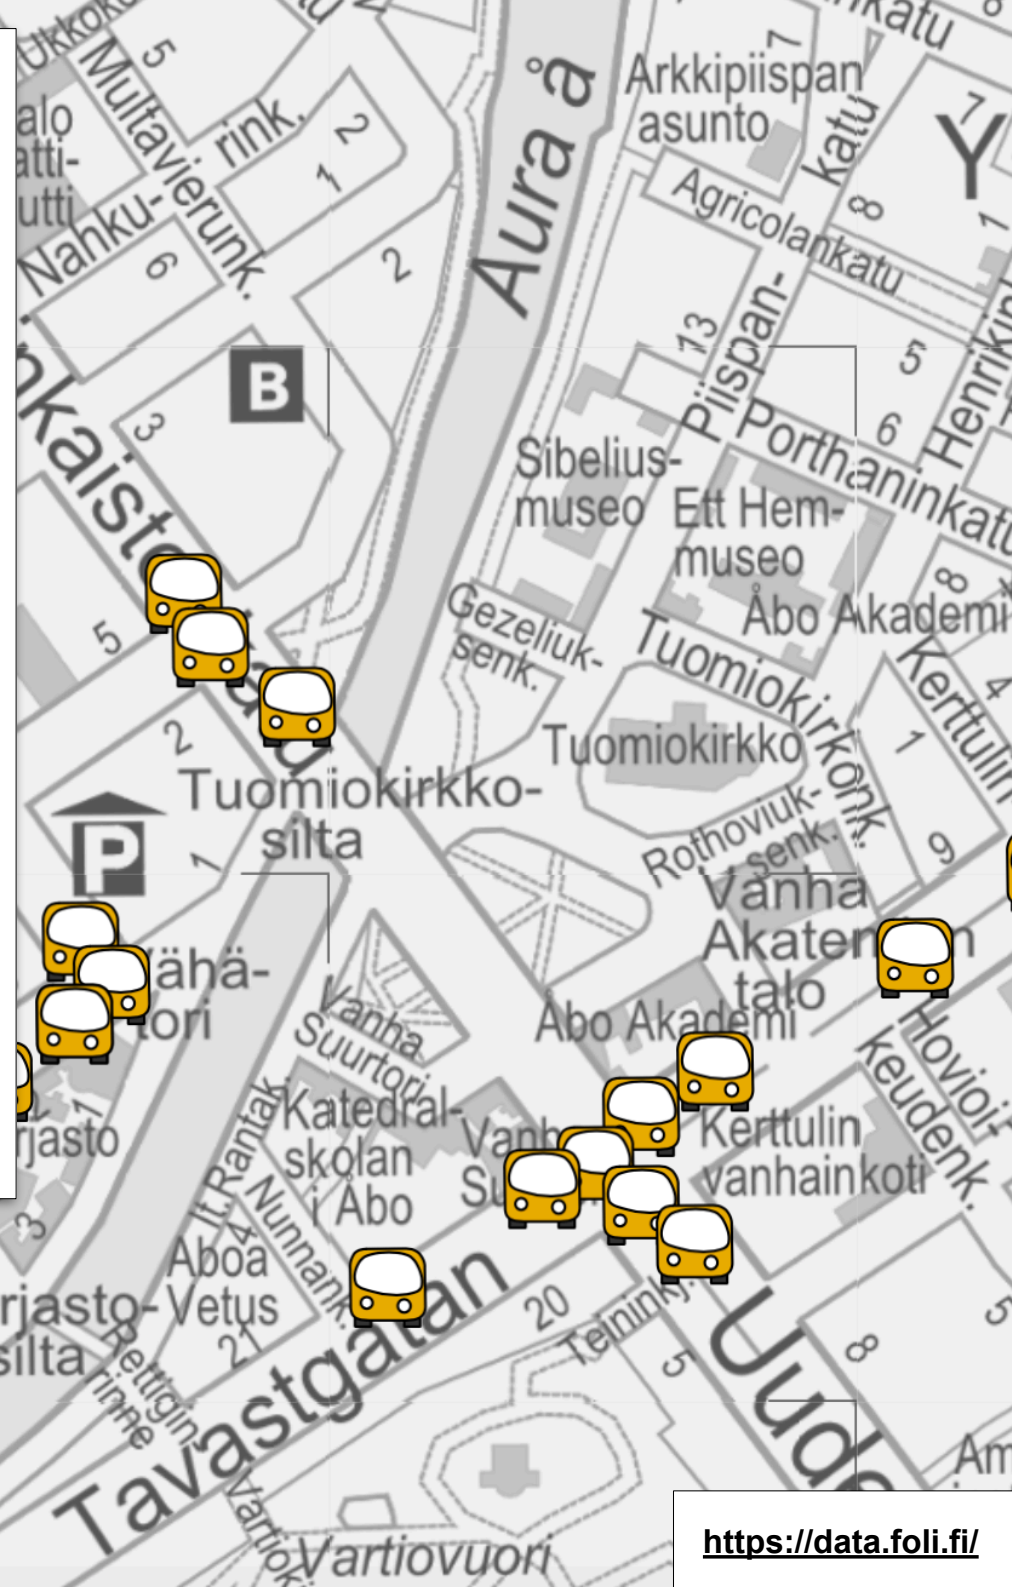

TSJL - transit API

data.foli.fi provides programmatic query interface to Turku region mass transit system's vehicle information and timetable data. The interface provides both static and realtime estimates about current status on mass transit system.

The API interface is open and available for everyone. There is not registration required, but of course it's assumed that utilizing the interface is appropriate and doesn't cause excessive burden on backend systems.

The interfaces provides two data sources :

- **GTFS** provides static planning data about stops, lines and theirs planned timetables
- **SIRI** provides real time data about vehicle locations and estimates of near term expected timetables.

TSJL - transit API

Data sets made available

The data sets are made available in machine-readable, digital format. Most of the data sets are already published. Rest of the data sets will be shared in phases as soon as it is technically ready for publishing. The Finnish Meteorological Institute also distributes the road weather observations of the Finnish Transport Infrastructure Agency, the radiation measurements of the Radiation and Nuclear Safety Authority and air quality observations from Finnish municipalities.

The Finnish Meteorological Institute share the following data

The data sets to be made available can be divided into three types: real-time observations, time series and forecasts.

Real-time observations

This category contains continuously made observations that are used for monitoring the state or properties of the atmosphere and the Baltic Sea. Measurements are made mostly at observation stations more often than ones a day.

- Wave and other observations from buoys
- Sea level observations
- Weather observations
- Sun radiation observations
- Lightning strikes
- Radar images
- Profile observations from masts
- Air quality observations
- Atmosphere sounding balloon observations up to 25 km
- METAR weather reports

Time series of observations

The category contains calculated values from the measurements and observations made at observation stations. The values calculated can be mean or extreme values of day, month or longer period.

- Station specific daily and monthly values
- Values of 30-year normal periods

Forecast models

The category contains forecast data from weather, sea, and air quality models that gives information about the future state of the atmosphere and the Baltic Sea. The output of a forecast model is usually grid like data. New forecast is commonly produced for a model more often than ones a day.

- Weather forecast models RCR HIRLAM and HARMONIE
- Air quality forecast models SILAM and FMI-ENFUSER
- Sea ice model HELMI

HOW SOTKANET.FI WORKS

City of Turku

Turku, with its surrounding municipalities, is an energetic centre of growth in the Baltic Sea area. The versatile livelihood structure, top class selection of education, culture, and services, as well as the beautiful archipelago, form a magnetic combination in Turku.

There are around 184 000 residents in Turku. The entire region has over 310 000 residents. A great portion of Turku residents are students. The city has two universities and four higher education institutions with over 35 000 students altogether.

In addition to residents, students and companies, Turku attracts tourists. Turku is one of the most popular travel and congress destinations in Finland.

The City of Turku co-operates actively with other cities and various interest groups both in Finland and abroad. Turku has offices in St. Petersburg and Brussels together with the Regional Council of Southwest Finland.
